

Service and dependency register

Dependency register

Lumenquay Identity Systems (V-005) delivers Identity and access engineering under CTR-005 and SOW-005. The accountable owner is Identity product owner (OWN-005). This document describes source relationships for later graph projection, not an assertion of production discovery.

Object ID	Object or application	Criticality / role	Relationship
APP-001	Payment Routing	Critical	SUPPORTS
APP-002	Card Authorization	Critical	SUPPORTS
APP-006	Identity Gateway	Critical	SUPPORTS

Trace: V-005 PROVIDES SVC-005; CTR-005 HAS_SOW SOW-005; SOW-005 FUNDS SVC-005. 12 workforce assignments support the service. 3 distinct critical applications are supported.

Every relationship carries a source ID, evidence reference, verification date and effective interval. Technical configuration items are listed in the matching JSON export. Organization/product accountability comes from the reference entities file.

Upstream prerequisites: authorized access, approved source inventories and customer change windows. Downstream effects require the service and asset owners to validate impact; a dependency alone does not establish an outage.

Service and dependency register (continued)

Continuity, substitution and impact

Recovery time objective for the supplier service: 60 minutes. Recovery point objective: 15 minutes for recoverable data.

Recovery actions: identify the affected scope, invoke the named owner, use the approved fallback, confirm minimum service and reconcile outstanding work before restoring normal operations. Test evidence is managed through the risk/control record.

Potential overlap candidate: none preselected. Capacity and transition readiness: Not assessed. Capability overlap does not constitute an approved replacement.

Commercial dependencies: notice deadline 2026-07-15, early-exit fee 2 monthly base fees, and a separately priced transition scope. Compare these with remaining contract term before estimating savings.

Impact query rules: count distinct affected applications, processes and assignments. A reduction in spend does not imply an equal percentage reduction in resources. Shared applications may depend on several vendors and must not be double-counted.

Evidence status: synthetic mappings are verified as fixtures on 2026-09-20. The intentional unvalidated alternative capacity must remain visible in any generated recommendation.
