

# Service and dependency register

## Dependency register

Norevia Decision Science (V-008) delivers Data science and vendor anomaly modeling under CTR-008 and SOW-008. The accountable owner is Model risk and analytics owner (OWN-008). This document describes source relationships for later graph projection, not an assertion of production discovery.

| Object ID | Object or application | Criticality / role | Relationship |
|-----------|-----------------------|--------------------|--------------|
| APP-008   | Reporting Hub         | Standard           | SUPPORTS     |
| APP-016   | Insights Workspace    | Standard           | SUPPORTS     |

Trace: V-008 PROVIDES SVC-008; CTR-008 HAS\_SOW SOW-008; SOW-008 FUNDS SVC-008. 10 workforce assignments support the service. 0 distinct critical applications are supported.

Every relationship carries a source ID, evidence reference, verification date and effective interval. Technical configuration items are listed in the matching JSON export. Organization/product accountability comes from the reference entities file.

Upstream prerequisites: authorized access, approved source inventories and customer change windows. Downstream effects require the service and asset owners to validate impact; a dependency alone does not establish an outage.

# Service and dependency register (continued)

## Continuity, substitution and impact

Recovery time objective for the supplier service: 480 minutes. Recovery point objective: 240 minutes for recoverable data.

Recovery actions: identify the affected scope, invoke the named owner, use the approved fallback, confirm minimum service and reconcile outstanding work before restoring normal operations. Test evidence is managed through the risk/control record.

Potential overlap candidate: none preselected. Capacity and transition readiness: Not assessed. Capability overlap does not constitute an approved replacement.

Commercial dependencies: notice deadline 2027-03-27, early-exit fee 0 monthly base fees, and a separately priced transition scope. Compare these with remaining contract term before estimating savings.

Impact query rules: count distinct affected applications, processes and assignments. A reduction in spend does not imply an equal percentage reduction in resources. Shared applications may depend on several vendors and must not be double-counted.

Evidence status: synthetic mappings are verified as fixtures on 2026-09-20. The intentional unvalidated alternative capacity must remain visible in any generated recommendation.
