

Service and dependency register

Dependency register

Kestrelune Site Protection (V-014) delivers Physical security services under CTR-014 and SOW-014. The accountable owner is Physical security owner (OWN-014). This document describes source relationships for later graph projection, not an assertion of production discovery.

Object ID	Object or application	Criticality / role	Relationship
PROC-014	Physical security services	Business process	SUPPORTS_PROCESS
SITE-01	Workplace location	Facility	DELIVERED_AT
APP-019	Facilities Portal	Enabling portal	USES_PORTAL

Trace: V-014 PROVIDES SVC-014; CTR-014 HAS_SOW SOW-014; SOW-014 FUNDS SVC-014. The vendor uses an enabling portal but does not support or operate its software. No application-support relationship is invented.

Every relationship carries a source ID, evidence reference, verification date and effective interval. Technical configuration items are listed in the matching JSON export. Organization/product accountability comes from the reference entities file.

Upstream prerequisites: authorized access, approved source inventories and customer change windows. Downstream effects require the service and asset owners to validate impact; a dependency alone does not establish an outage.

Service and dependency register (continued)

Continuity, substitution and impact

Recovery time objective for the supplier service: 240 minutes. Recovery point objective: not applicable to this non-technical service; use process/custody reconstruction procedures.

Recovery actions: identify the affected scope, invoke the named owner, use the approved fallback, confirm minimum service and reconcile outstanding work before restoring normal operations. Test evidence is managed through the risk/control record.

Potential overlap candidate: none preselected. Capacity and transition readiness: Not assessed. Capability overlap does not constitute an approved replacement.

Commercial dependencies: notice deadline 2026-10-18, early-exit fee 0 monthly base fees, and a separately priced transition scope. Compare these with remaining contract term before estimating savings.

Impact query rules: count distinct affected applications, processes and assignments. A reduction in spend does not imply an equal percentage reduction in resources. Shared applications may depend on several vendors and must not be double-counted.

Evidence status: synthetic mappings are verified as fixtures on 2026-09-20. The intentional unvalidated alternative capacity must remain visible in any generated recommendation.
